

DEAN'S LECTURE SERIES PRESENTS:

DR. NANCY HOALST PULLEN &
DR. MARK W. PATTERSON:
Hidden Geographies of Beer

Beer. It's more than the world's 3rd most consumed beverage. It's what helped build pyramids, bequeathed power to nobles and sent witches to their deaths. Although deceptively simple in its four main ingredients - water, barley, hops and yeast - it is both rich in its history and complex in its geography, and its cornucopia of styles stretch across six continents and influence the culture, economics, and even politics of communities, societies and nation-states.

Beer has hidden geographies, and this presentation will investigate the role of beer over time and space, crisscrossing continents on a 160,000 mile odyssey to explore the origin of styles, migrations to distant lands, and the influences of place.

WHEN

**Thursday,
February 9
3:30pm-5:00pm**

WHERE

**Kennesaw
Campus**

History Center,
Social Science

BY

**Dr. Nancy Hoalst
Pullen &**
